The Biology of Deserts (Biology of Habitats) David Ward

This book offers a concise but comprehensive introduction to desert ecology and adopts a strong evolutionary focus. As with other titles in the *Biology of Habitats Series*, the emphasis in the book is on the organisms that dominate this harsh environment, although theoretical and experimental aspects as well as conservation and desertification are also considered.

Deserts are defined by their arid conditions; a consequence of this aridity is that most of the area occupied by desert is barren and monotonous, leading many people to regard it as wasteland. However, deserts are widespread and represent surprisingly biodiverse environments, although it is the relative simplicity of these ecosystems that makes them more tractable for study than more complex environments. In these resource-poor locations, natural selection is working at its most extreme and provides some of the best-known examples of Darwinian selection.

The Biology of Deserts includes a wide range of ecological and evolutionary issues including morphological and physiological adaptations of desert plants and animals, species interactions, the importance of predation and parasitism, food webs, biodiversity and conservation. It features a balance of plant and animal (both invertebrate and vertebrate) examples, and also emphasizes topical applied issues such as desertification and invasive species. The book concludes by considering the positive aspects of desert conservation.

Each of the books in the Oxford *Biology of Habitats Series* introduces a different habitat, and gives an integrated overview of the design, physiology, ecology, and behaviour of the organisms found there. The practical aspects of working within each habitat, the sorts of studies that are possible, and habitat biodiversity and conservation status are all explored.

From reader reviews:

Velma Stuart:

As people who live in the actual modest era should be up-date about what going on or info even knowledge to make these individuals keep up with the era that is certainly always change and make progress. Some of you maybe will probably update themselves by studying books. It is a good choice for you but the problems coming to you is you don't know which one you should start with. This The Biology of Deserts (Biology of Habitats) is our recommendation to help you keep up with the world. Why, since this book serves what you want and need in this era.

Clinton Whitten:

Nowadays reading books become more and more than want or need but also be a life style. This reading addiction give you lot of advantages. Associate programs you got of course the knowledge the particular information inside the book this improve your knowledge and information. The info you get based on what kind of guide you read, if you want drive more knowledge just go with training books but if you want really feel happy read one using theme for entertaining for example comic or novel. Typically the The Biology of Deserts (Biology of Habitats) is kind of e-book which is giving the reader unstable experience.

Martin Solomon:

Typically the book The Biology of Deserts (Biology of Habitats) will bring someone to the new experience of reading a new book. The author style to describe the idea is very unique. Should you try to find new book to learn, this book very ideal to you. The book The Biology of Deserts (Biology of Habitats) is much recommended to you to learn. You can also get the e-book from your official web site, so you can more readily to read the book.

Eva Sexton:

What is your hobby? Have you heard that question when you got pupils? We believe that that issue was given by teacher on their students. Many kinds of hobby, Every person has different hobby. And you also know that little person just like reading or as reading through become their hobby. You need to know that reading is very important along with book as to be the thing. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You find good news or update concerning something by book. Amount types of books that can you choose to adopt be your object. One of them is The Biology of Deserts (Biology of Habitats).
