Spatial Data on the Web Alberto Belussi, Barbara Catania, Eliseo Clementini, Elena Ferrari
Spatial data is essential in a wide range of application domains today. While geographical applications remain the key target area, spatial properties are required in other contexts such as computer-aided design, robotics and image processing. Associated with these is the constantly growing number of distributed processing architectures, based on, for example, grid systems, sensor data networks, and personalized smart devices. Spatial Data on the Web links these two research streams, focusing on the modeling and management of spatial data in distributed systems. Belussi and his coeditors have structured the contributions from internationally renowned researchers into four parts. Part I presents models for representing semistructured, multiresolution and multiscale data; Part II deals with the integration of spatial data sources; Part III describes approaches to spatial data protection; and, finally, Part IV reports innovative applications for mobile devices. The book offers researchers in academia and industry an excellent overview of the state of the art in modeling and management of spatial data in distributed environments, while it may also be the basis of specialized courses on Web-based geographical information systems.

From reader reviews:

Clarence Hamm:

Inside other case, little persons like to read book Spatial Data on the Web. You can choose the best book if you love reading a book. Given that we know about how is important some sort of book Spatial Data on the Web. You can add know-how and of course you can around the world by way of a book. Absolutely right, since from book you can know everything! From your country until finally foreign or abroad you will find yourself known. About simple issue until wonderful thing you can know that. In this era, we can open a book as well as searching by internet unit. It is called e-book. You may use it when you feel uninterested to go to the library. Let's learn.

Jose Jones:

The particular book Spatial Data on the Web will bring you to the new experience of reading a new book. The author style to describe the idea is very unique. When you try to find new book you just read, this book very ideal to you. The book Spatial Data on the Web is much recommended to you you just read. You can also get the e-book in the official web site, so you can more easily to read the book.

Don Numbers:

A lot of people always spent their particular free time to vacation or go to the outside with them friends and family or their friend. Do you realize? Many a lot of people spent that they free time just watching TV, or perhaps playing video games all day long. If you wish to try to find a new activity that is look different you can read some sort of book. It is really fun for yourself. If you enjoy the book that you simply read you can spent the whole day to reading a reserve. The book Spatial Data on the Web it is quite good to read. There are a lot of people who recommended this book. We were holding enjoying reading this book. In the event you did not have enough space to create this book you can buy typically the e-book. You can m0ore very easily to read this book from a smart phone. The price is not too expensive but this book offers high quality.

Michael Mitchell:

Reading can called head hangout, why? Because while you are reading a book particularly book entitled Spatial Data on the Web the mind will drift away trough every dimension, wandering in every single aspect that maybe mysterious for but surely can become your mind friends. Imaging every word written in a reserve then become one application form conclusion and explanation which maybe you never get just before. The Spatial Data on the Web giving you an additional experience more than blown away your brain but also giving you useful info for your better life in this era. So now let us explain to you the relaxing pattern is your body and mind will be pleased when you are finished reading it, like winning a casino game. Do you want to try this extraordinary wasting spare time activity?
