Textbook of Remote Sensing and Geographical Information Systems

Kali Charan Sahu

Textbook of Remote Sensing and Geographical Information Systems Kali Charan Sahu

Remote sensing technology in India started in the 1960s. Space technology was developed during the 1970s and 1980s to use satellites and sensors in the areas of communication to exploit meteorological and ground resources. Like some other developing countries, India could bypass the intermediate technology stage and leapfrog into the high technology area. Indias first satellite in IRS series was IRS-1A, launched in March 1988 by a Russian Vostok launch vehicle. Our space technology has attained momentum and made tremendous achievements by launching the Oceansat-1 for ocean resources monitoring; Resourcesat-1 for agricultural applications; and Cartosat-1 with a high resolution panchromatic camera for cartographic applications. In India, the remote sensing technology along with Geographic Information System (GIS) is widely being used for more than two decades for inventorying, mapping and monitoring of Earth resources, and for mitigation and management of natural disasters. In days to come it will become the most powerful tool for management and distribution of information for various purposes. This book is solely written to meet the requirements of undergraduate courses in B.E. (Civil Engineering), B.Tech (Geoinformatics), the postgraduate courses and M.Tech in Remote Sensing, Postgraduate Diploma in Remote Sensing and GIS, and M.E (Geoinformatics) of various universities and institutions. Topics are covered with adequate Tables and Illustrations essential to an introductory text. The book offers key concepts with the use of simple and limited mathematics. Digital Image Processing, which forms the backbone of the book, is dealt with special care. The book explains fundamental basis of GIS technology, spatial data modeling, attributes data management, GIS data analysis and modeling. It will also serve as an ideal reference book for researchers in this field and practical users of this technology.

From reader reviews:

Anthony Russell:

Information is provisions for anyone to get better life, information today can get by anyone in everywhere. The information can be a know-how or any news even restricted. What people must be consider whenever those information which is from the former life are challenging be find than now could be taking seriously which one is acceptable to believe or which one the actual resource are convinced. If you receive the unstable resource then you obtain it as your main information it will have huge disadvantage for you. All of those possibilities will not happen in you if you take Textbook of Remote Sensing and Geographical Information Systems as your daily resource information.

Ann Bland:

This book untitled Textbook of Remote Sensing and Geographical Information Systems to be one of several books that will best seller in this year, that's because when you read this reserve you can get a lot of benefit onto it. You will easily to buy this book in the book shop or you can order it by means of online. The publisher with this book sells the e-book too. It makes you quickly to read this book, because you can read this book in your Mobile phone. So there is no reason to your account to past this publication from your list.

Sandra Maes:

Can you one of the book lovers? If so, do you ever feeling doubt while you are in the book store? Try and pick one book that you find out the inside because don't judge book by its cover may doesn't work at this point is difficult job because you are scared that the inside maybe not since fantastic as in the outside search likes. Maybe you answer may be Textbook of Remote Sensing and Geographical Information Systems why because the great cover that make you consider about the content will not disappoint you actually. The inside or content is definitely fantastic as the outside or perhaps cover. Your reading 6th sense will directly direct you to pick up this book.

Andrea Winburn:

Beside this kind of Textbook of Remote Sensing and Geographical Information Systems in your phone, it can give you a way to get closer to the new knowledge or information. The information and the knowledge you are going to got here is fresh in the oven so don't be worry if you feel like an old people live in narrow town. It is good thing to have Textbook of Remote Sensing and Geographical Information Systems because this book offers to your account readable information. Do you occasionally have book but you would not get what it's all about. Oh come on, that would not happen if you have this in the hand. The Enjoyable agreement here cannot be questionable, including treasuring beautiful island. Use you still want to miss this? Find this book in addition to read it from today!
