Evolutionary Theory and Human Nature Ron Vannelli

Evolutionary Theory and Human Nature is an original, highly theoretical work dealing with the transition from genes to behavior using general principles of evolution, especially those of sexual selection. It seeks to develop a seamless transition from genes to human motivations as bio-electric brain processes (emotional-cognitive processes), to human nature propensities (various constellations of emotional-cognitive forces, desires and fears) to species typical patterns of behavior.

This work covers two often antagonistic fields: biology and the social sciences. It should be of strong interest to anthropologists, sociologists, sociobiologists, psychobiologists and psychologists who are interested in the question of human nature influences on social behavior.
