New Challenges in Energy Security: The UK in a Multipolar World (Energy, Climate and the Environment)

New Challenges in Energy Security: The UK in a Multipolar World (Energy, Climate and the Environment)

We are faced with the twin urgent challenges of delivering a low carbon and secure energy system. The last few years have seen Britain moving from being a net exporter to a net importer of energy. The threat of climate change has led to the slow but inexorable inclusion of environmental concerns in mainstream energy policy. Against this backdrop, economic and political power around the globe has altered, creating a complex, multipolar world. Rising concerns about the long term availability and price of oil, gas and uranium only add to the challenges facing Britain. This timely volume brings together key researchers and practitioners from a wide range of disciplines, including energy policy, international relations and supply chains, to explore the practical policy options in addressing energy security in Britain.
