## Transformation Products of Emerging Contaminants in the Environment: Analysis, Processes, Occurrence, Effects and Risks

Over the last 15 years, the focus of chemical pollution has shifted from conventional pollutants to so-called “emerging” or “new” unregulated contaminants. These include pharmaceuticals and personal care products, hormones, UV filters, perfluorinated compounds, polybrominated flame retardants (BFRs), pesticides, plasticizers, artificial sweeteners, illicit drugs, and endocrine disruptor compounds (EDCs). Despite the increasing number of published studies covering emerging contaminants, we know almost nothing about the effects of their transformation products and/or metabolites.

This two-volume set provides a unique collection of research on transformation products, their occurrence, fate and risks in the environment. It contains 32 chapters, organised into 7 parts, each with a distinct focus:

- General Considerations
- Transformation Processes and Treatment Strategies
- Analytical Strategies
- Occurrence, Fate and Effects in the Environment
- Global Speciality and Environmental Status
- Risk Assessment, Management and Regulatory Framework
- Outlook

*Transformation Products of Emerging Contaminants in the Environment* is a valuable resource for researchers and industry professionals in environmental chemistry, analytical chemistry, ecotoxicology, environmental sciences, and hydrology, as well as environmental consultants and regulatory bodies.
