Principles of Ecotoxicology, 2nd Edition D.B. PEAKALL

Over the past decade ecotoxicology has emerged as a distinct subject of interdisciplinary character. Courses in ecotoxicology reflect this and are taught by specialists in chemistry and biochemistry through to population genetics and ecology. As the first textbook to incorporate these disciplines, the first edition of this book proved to be well received. The second edition builds on the first by incorporating new data on topical subjects. Principles of Ecotoxicology identifies the major classes of organic and inorganic pollutants, their properties, release and environmental fate, and transport in air, water and along food chains, before considering the effects that they might have upon individual organisms and ultimately whole ecosystems. This timely second edition incorporates data collected since the first edition on subjects of current research and media interest such as organochloride pesticides, endocrine disruptors, aquatic toxicity, industrial waste and ecotoxicity testing. Once again the disciplines of chemistry, biochemistry, toxicology, physiology, population ecology, and genetics are brought together in this cohesive text.
